

**Catallytic And Regioselective Synthesis Of Gem- Or
Trans-Alpha,Beta-Unsaturated Amides By Carbonylation Of
Alkyl Alkynes
With Aniline Derivatives By Palladium(II) And Phosphine**

Summary

The reaction of carbonylative addition of alkyl alkynes to aniline derivatives has been successfully achieved by a catalytic system formed of Pd(OAc)₂ and a suitable bidentate phosphine ligand. The reaction led mainly to gem-alpha,beta-unsaturated amides (3) with Pd(OAc)(2)/1,3-bis(diphenylphosphino)propane/p-toluenesulfonic acid/CO as the catalytic system. However, the reaction catalyzed by Pd(OAc)(2)/1,4-bis(diphenylphosphino)butane/H-2/CO in CH₂Cl₂ as a solvent affords trans-alpha,beta-unsaturated amides (4) as the major product.
